TOP PRIORITY: Phase 1 Drilling Multiple Targets for Porphyry Copper/Gold at Hay Mountain Project

Hay Mountain targets are DRILL READY

Arizona is the top producing state in the USA for copper producing 60% of the nation's total. If it was a country, Arizona would be the number two producer in the world for copper behind Chile. International mining companies involved in Arizona copper mining include Freeport-McMoRan, BHP, Rio Tinto, Vale and Grupo Mexico-ASARCO.

- Potential for discovery of a high grade sediment and porphyry hosted copper, gold, and moly ore body of an estimated size of nearing \$100 billion contained metal value exists, and is of the same type as the nearby deposit 15 miles to the southeast.
- Multiple targets over copper-gold anomalies have been determined using sophisticated ground studies including assayed geochemical samples, airborne ZTEM geophysical surveys rendering magnetic and electromagnetic data and technical reports from an independent qualified geologist.
- Recent discovery of surface outcrops suggests near surface targets, significantly lowering development time and costs.
- Liberty Star's CEO and Chief Geologist is a Registered Professional Geologist with decades of experience in southeastern Arizona.
